ISO 19203:2018 (E)

Hot-dip galvanized and zinc-aluminium coated high tensile steel wire for bridge cables — Specifications

Contents

	Fore	eword	
1	Scope		
2	Normative references		
3	Tern	Terms and definitions	
4	Sym	bols	
5	Desi	Designation of the product	
6	Info	Information needed by the manufacturer	
7	Requirements		
	7.1 7.2 7.2.1 7.2.2	Materials and manufacture Standard properties Geometrical properties Straightness	
	7.2.2.1 7.2.2.2 7.2.3 7.2.4	General Bow height Mechanical and coating properties Appearance	
	7.3 7.4	Special properties Traceability	
8	Inspection		
	8.1 8.2 8.3 8.4	Inspection and inspection documents Number of samples and test pieces Evaluation of test results Sorting and reprocessing	
9	Test methods		
	9.1 9.1.1 9.1.2 9.1.3 9.1.4 9.1.5 9.1.6 9.1.7 9.1.8 9.2 9.2.1 9.2.2 9.2.3 9.2.4	Testing of standard properties Measurement of geometrical characteristics Tensile test Elasticity modulus test Torsion test Ductility wrapping test Mass of coating Adhesive of coating Surface quality Testing of special properties Uniformity of zinc or zinc-aluminium coating (dipping test) Corrosion resistance test Axial force fatigue test Isothermal stress relaxation test	
10	Delivery conditions		
	10.1 10.2 10.3 10.4	Identification Coil dimensions Coil weight Transport and storage	

Annex A	(normative) Additional test methods — Axial force fatigue test	
A .1	Principle of test	
A.2	Test piece	
A.3	Test conditions	
A.4	Test procedure	
Annex B	(normative) Additional test methods — Isothermal stress relaxation test	
B.1	Principle of test	
B.2	Test piece	
B.3	Test conditions	
B.4	Test procedure	

Annex C (informative) Calculation of the density of steel wire and diameter of bare steel wire
