| 4.8.8   | Other specific formulae for the calculation of stopping distance ..... | 46 |
| 4.9   | Supplementary dynamic calculations .....                               | 46 |
| 4.9.1   | General .....  | 46 |
| 4.9.2   | Mass to be braked (mB) .....   | 47 |
| 4.9.3   | Braking energy .....   | 47 |
| 4.9.4   | Maximum braking power of each brake equipment type .....               | 49 |
| 4.9.5   | Maximum specific power flux for each type of friction brake .....      | 49 |
| 4.10  | Specific expressions of braking performance .....                      | 50 |
| 4.10.1  | General .....  | 50 |
| 4.10.2  | Braked weight percentage (%) .....                                     | 50 |
| 4.10.3  | Braked weight .....  | 50 |
| 4.10.4  | Braking ratio .....  | 50 |
| 4.10.5  | Equivalent brake force .....   | 50 |
| 5   | Immobilization brake calculation .....                                 | 50 |
| 5.1   | General .....  | 50 |
| 5.2   | General characteristics .....  | 50 |
| 5.3   | Static coefficient of friction .....                                   | 51 |
| 5.4   | Train and operating characteristics .....                              | 51 |
| 5.5   | Immobilization force provided by equipment type .....                  | 51 |
| 5.5.1   | General .....  | 51 |
| 5.5.2   | Force of a screw hand brake (Tread brake) .....                        | 52 |
| 5.5.3   | Force of a screw hand brake (Disc brake) .....                         | 52 |
| 5.5.4   | Force of a tread brake unit .....                                      | 52 |
| 5.5.5   | Force of a disc brake unit arrangement .....                           | 53 |
| 5.5.6   | Force of a permanent magnetic track brake .....                        | 53 |
| 5.6   | Immobilization force for each axle .....                               | 54 |
| 5.7   | Total immobilization force per train .....                             | 54 |
| 5.8   | Immobilization safety factor .....                                     | 55 |
| 5.9   | Coefficient of adhesion required by each braked axle .....             | 55 |
| 5.10  | Maximum achievable gradient .....                                      | 56 |
| Annex A (informative) Workflow of stopping and slowing distance calculation method .....  |  | 57 |
| Annex B (informative) Workflow of immobilization calculations .....   |  | 59 |
| Annex C (informative) Brake equipment type example calculations .....   |  | 60 |
| Annex D (informative) Train stopping distance and immobilization brake calculation example .....  |  | 72 |
| D.1   | General .....  | 72 |
| D.2   | Train stopping calculations .....                                      | 73 |
| D.3   | Train stopping calculations on a gradient .....                        | 75 |
| D.4   | Train immobilization (parking) brake calculations .....                | 75 |
| Annex E (informative) Development of the formula for the mean brake force with respect to the<br>braking distance .....   |  | 77 |
| Annex F (informative) Slowing or stopping distance calculation using alternative method of<br>equivalent response time calculation as French Railway requirements in particular for<br>trains operating in 'G' position ..... |  | 78 |
| Annex ZA (informative) Relationship between this European Standard and the Essential<br>Requirements of EU Directive 2008/57/EC .....   |  | 80 |
| Bibliography .....  |  | 83 |
