Ships and marine technology - Measurement of changes in hull and propeller performance - Part 1: General principles

Contents		Page
Foreword		iv
Introduction		v
1	Scope	1
2	Normative references	1
3	Terms and definitions	1
4	General principles	2
4.1	Hull and propeller performance	2
4.2	Ship propulsion efficiency and total resistance	3
4.3	Primary parameters when measuring changes in hull and propeller performance	4
4.4	Secondary parameters	5
4.5	Measurement procedures	5
4.5.1	General	5
4.5.2	Data acquisition	6
4.5.3	Data storage	6
4.5.4	Data preparation	6
5	Performance indicators	6
5.1	Dry-docking performance: Change in hull and propeller performance following present out-docking as compared with the average from previous out-dockings	7
5.2	In-service performance: The average change in hull and propeller performance over the period following out-docking to the end of the dry-docking interval	8
5.3	Maintenance trigger: Change in hull and propeller performance from the start of the dry-docking interval to a moving average at any chosen time	9
5.4	Maintenance effect: Change in hull and propeller performance measured before and after a maintenance event	10
6	Measurement uncertainties and the accuracy of the performance indicators	11
Annex A (informative)	Method and assumptions for estimating the uncertainty of a performance analyses process	13
